

Premium Factory Finishes. Consistent Color. Enduring Performance.

The Pacific Collection from Lynden Door offers a curated palette of eleven standard stain colors, including clear, across ten natural wood veneer species. Carefully developed, each finish enhances the wood's unique grain and character, helping designers and architects achieve consistent, beautiful results across a wide range of projects.

Stain interacts differently with each species. The Pacific Collection lets designers pair the right color with the right veneer, highlighting the warmth of Maple, the texture of Oak, or the depth of darker species.

Precision Factory Finishing

Skilled technicians apply Pacific Collection finishes in a controlled factory, using advanced UV-cured technology. This process ensures a durable, consistent finish that enhances the veneer's natural beauty while meeting demanding commercial standards.

Our finishing system exceeds WDMA TR-6 (NAAWS System 11) and meets WDMA TR-8 (NAAWS System 9) UV-cured specifications. These are the architectural industry standards for high-performance wood door finishes. Factory finishing ensures that all doors have a uniform appearance. It also reduces project lead times compared to custom field-applied finishes.

Consistency with Design Flexibility

Selecting a standard Pacific Collection stain gives designers and builders the assurance of consistent color and reliable performance. It also reduces lead times. For projects needing a unique look, Lynden Door offers custom color matching to complement almost any design palette.

Performance You Can Rely On

Pacific Collection finishes are designed to protect and preserve natural wood. The coating system includes ultraviolet inhibitors that help maintain a clear, "water-white" appearance. These inhibitors also slow the natural aging process of the wood veneer.

Additional benefits include:

- Non-flammable coating that does not affect flame spread rating or smoke density
- 100% colorfast organic earthen pigments for long-term color stability
- The finishes emit zero VOCs and contain no formaldehyde. This supports environmentally responsible construction.

Natural Beauty, Authentically Preserved

Wood is a natural material. Variations in grain and color are part of its inherent beauty. Even veneers from the same tree may show subtle differences. These details add character to the finished door. The Pacific Collection finishing process enhances these qualities. It also seals the door surfaces, reducing moisture transfer and helping prevent warping.
